

Nutri-Pel for Pastures

A dairy farmer in eastern Ontario has been using Nutri-Pel on his pastures and hay fields for the last two years and plans on continuing this practice this year and into the future. His cattle have gone to pasture in the spring and have been able to come back to the same pasture 3 or 4 times in the same season. Prior to using the Nutri-Pel the cattle were only able to go to this pasture once in a season.

The low cost Nutri-Pel fertilizer is readily available and easy to apply to any type of pastures or fields. The benefits of investing in the fertilizer application include:

- ◆ Easy application practices and more flexible application guidelines
- ◆ Great for hay and pastures that the manure doesn't get to
- ◆ Cattle can return to pasture the next day after application
- ◆ Great fertilizer for lands starved of organic content and nutrients
- ◆ Cows and calves are fatter and healthier
- ◆ Replenishes the sulfur that hay growth depletes

The use of Nutri-Pel has resulted in lower costs to the farmer by being able to use the same pasture multiple times in a season. Additional benefits include healthier livestock and improved profitability. Investing in Nutri-Pel provides positive financial returns.
